

HLMSW Version 3.80 Build (1.00)

Introduction

The major new feature set in this version of HLMSW includes the first stage of Zinfonia integration.

An important aspect of the Zinfonia system is a central composer database. All of the composers in the database have been provided by subscribers to Zinfonia and users of HLMSW to create a comprehensive list of names. A high degree of integrity is possible because each composer is independently verified from a variety of reputable resources to provide information of high quality and consistency.

Accurate composer information is important not only for the clear identification of works, but also for the calculation of fees based on the year of death.

With this release of Zinfonia, HLMSW provide access to additional Zinfonia-centric data fields, as well as access to the Zinfonia composer resource directly from within HLMSW.

First Steps

Before the options described below are available, it is necessary to register with Zinfonia, a process that will be undertaken during the course of 2010 with all interested parties. Once registered, an interface is provided to automatically transfer all data between HLMSW and Zinfonia (this is known as the HLMSW B2B Interface).

The Zinfonia Button

If your HLMSW is registered with HLMSW, you will notice a new button and menu option called Zinfonia which when available may be selected by using the Ctrl+Alt+Z key combination.

This button is only available when a composer, work, account or transaction is displayed.

If you click on this button, a new **Zinfonia Details** dialog is displayed.

Note: in this release the ONLY tab that is functional is the Composer tab. The Work, Account, Publisher and Transaction Tabs will be utilised in forthcoming releases.

The available options change if you Edit the composer BEFORE selecting the Zinfonia button.

The options available here are as follows:

Zinfonia Status will display:

- *Not Available*: Zinfonia has not been properly configured
- *Waiting for B2B Interface*: The composer has not yet been transferred to Zinfonia by the Business-to-Business Interface
- *Waiting for Zinfonia*: The composer has been transferred to Zinfonia and is awaiting processing (all composers must be processed the FIRST time they are transferred, and are not available until then)
- *Available on Zinfonia*: The composer is available on Zinfonia.

Last Updated displayed the date and time the Zinfonia entry was last created or updated.

Zinfonia ID: When available in Zinfonia, the internal Zinfonia ID that matches your composer with the record on Zinfonia is shown.

Update Zinfonia Detail: After a composer has been processed for the first time, changes to details are NOT normally checked by Zinfonia unless you mark this box. If for example there is wrong information being displayed on Zinfonia, marking this item will force the record to be vetted by the Zinfonia Administration again.

Hide in Zinfonia: This option (which is only available to System Administrators) allows you to hide ALL works by this composer so that they are not available for new orders on Zinfonia (existing orders will not be affected). Changes to the visibility are only made according to your update schedule with Zinfonia (usually every 24 hours). Reports of hidden composers, works and publishers will be available through Zinfonia.

Home Page URL: If the composer has their own home page, you can include the information here. (The globe alongside the URL allows you to open the link).

Image URL: If your company has an image you would like to make available for the Zinfonia page that mentions this composer, places the fully qualified link here.

Image Text: Place any text here (like copyright information) that you want to be displayed with the picture

Info URL: If your company has a web page with more information about the composer, then include the link here so Zinfonia clients can go directly to your site.

Info Language: Is the language of the Info URL link. Currently only English, German, French and Italian languages are supported. If you have multiple languages, use the English version.

Search Zinfonia

This button (which is available when the Composer has not been processed by Zinfonia) allows you to search Zinfonia composer information based on whatever was entered into the Composer Last and First name fields in HLMSW. This feature is particularly handy if you are adding a new composer as you can use the resources of Zinfonia to locate and enter the birth and death dates and places as well as the composer's home page.

When multiple composers are found, they are displayed in the Composers window with the detail below. Click on a composer to see the information and the **Update HLMSW** button (discussed below) is used to insert the data into HLMSW.

Retrieve from Zinfonia

This button (which is available after a composer has been processed) will display detail of the record/s that your composer is linked to in Zinfonia. In Zinfonia, you can link to up to three different composers to the same HLMSW composer (for example, Webern's famous realisation of Bach's Ricercar from the Musical Offering would be linked to both Webern and JS Bach), and so if there are multiple composers they will be displayed in the Composers selection box.
