

# Customising and Saving your HLMSW Display

---

The new HLMSW v7 display formatting and saving options allow you to create any number of customised displays for every computer. Every user can have multiple displays configurations that can be changed with a few mouse clicks and even shared with other users.

## Customising your display

The best procedure to customise your display is to follow these steps:

- 1) Make sure your HLMSW Window is Maximised (taking up the FULL screen)

You do not have to use the full screen for HLMSW, but all of the operations below will use the size of the HLMSW that is currently displayed.

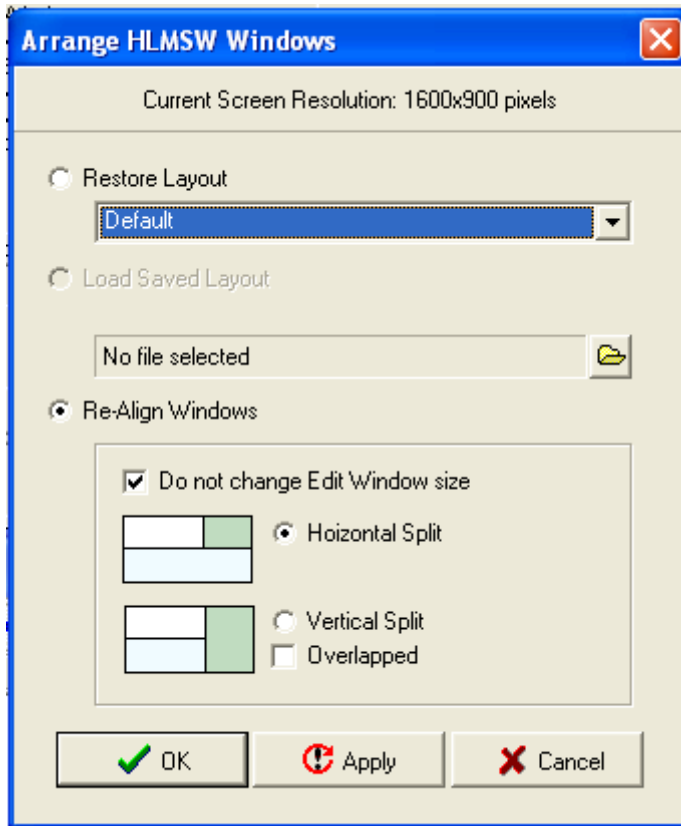

### **BTM Innovation Pty Ltd**

ACN 090 385 176 • ABN 71 090 385 176

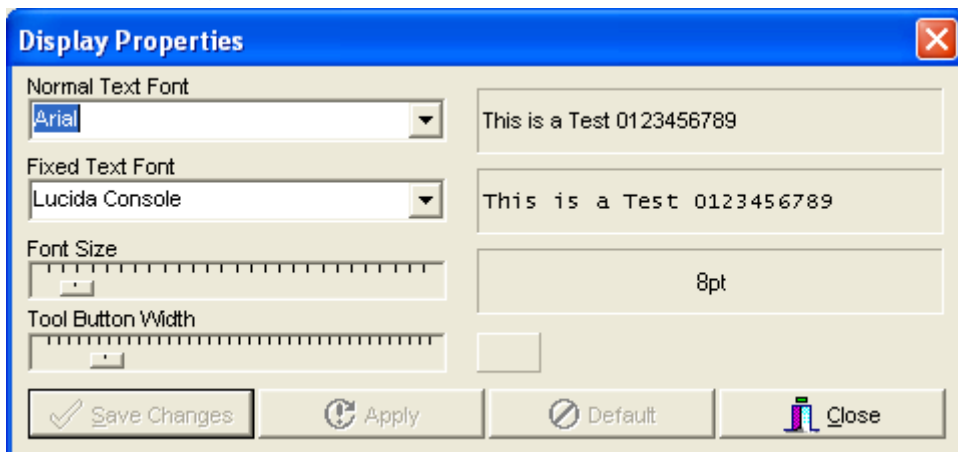

**Please note NEW Address**

8 Finnis Street • North Adelaide • SOUTH AUSTRALIA • 5006  
PO Box 3054 • Melbourne Street • North Adelaide • SOUTH AUSTRALIA • 5006  
Tel/Fax +61 (0)8 8239 1737 • Mobile +61 (0) 409 286 400  
info@btmi.com.au • <http://www.btmi.com.au>

- 2) Click on the *Windows/Arrange...* option. Make sure the **Re-Align Windows** option is selected and choose between the **Horizontal** and **Vertical** split. (Horizontal split is best for large screens and vertical with overlap is best for small screens)

- 3) Click on the *Windows/Display Properties* menu option and select the font names and size appropriate for your computer (Arial and Lucida Console are the recommended fonts for HLMSW).

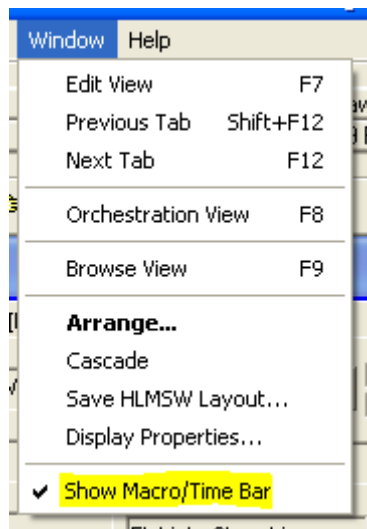

- 4) Click on the new icons in the Orchestration Window to select the location of the Extra Database Fields window from either tabbed (the default), vertical or horizontal split.

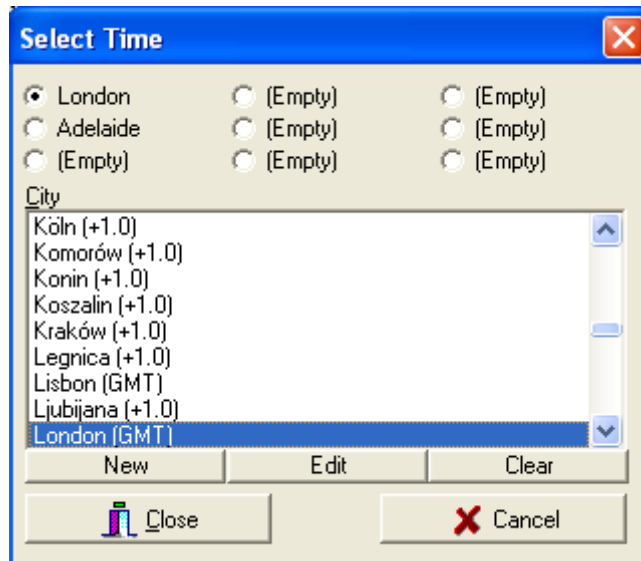

If Horizontal or Vertical splits are selected, move the centre divider between the Orchestration and Extra Database fields to the required position (do not forget that the visible columns in the orchestration window will change from time to time). You can also alter the size of the Extra Database Field Name Value Sections.

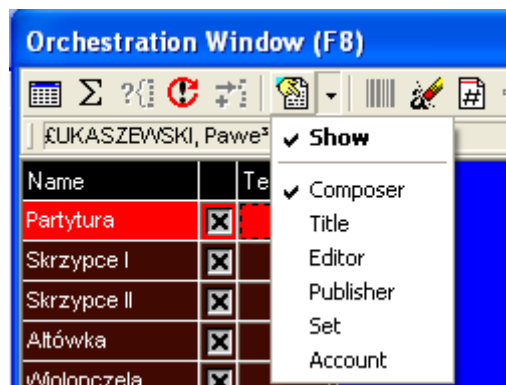

- 5) Make any final adjustments to the display including:
- Select or remove the *Windows/Show Macro/Time Bar* option

- Select the clock locations you want displayed by clicking the time window

- Show or hide database information in the Orchestration window using the Show button

- Make sure the button bars in the Orchestration Browse Windows are displayed the way you require by dragging the vertical separators

- 6) Select the *Window/Save HLMSW Layout* and (making sure the *Set as Default Layout* option is selected) and press OK.

**Note: It is also recommended you save a copy of your configuration to a file to keep the archive of these settings.**

- 7) Finally log off and log on to HLMSW to make sure the settings are all OK.

## Creating a Different Configuration

To create a different configuration, arrange the windows as described above and then select the *Window/Save HLMSW Layout* option. Now select (New) from the drop down list (or select an existing item to over-write the layout), and the name and click the save button. Only select the **Set as Default Layout** if you want this layout to load every time you start HLMSW.

**Note: Any changes to the layout you make from this point on will be automatically saved when you exit HLMSW. If you want to always retain the settings as they are, I recommend you save a copy of the layout to a file, or you immediately switch back to your default layout.**

## Changing your Configuration

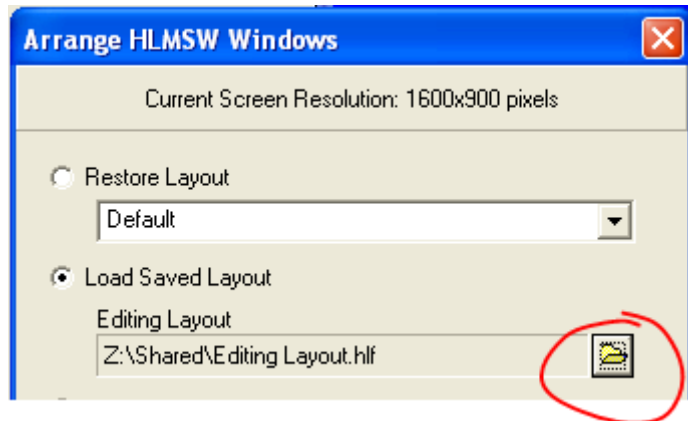

To change to a different configuration use the *Windows/Arrange...* option and select a previously saved Layout from the drop down list. **Note: HLMSW will only display saved layouts made by this user for this size screen) and all changes to this layout will be saved when you exit HLMSW.**

## Sharing your Configuration with Other Users

To share your configuration with other users you must first create a Desktop Configuration file using the *Windows/Save HLMSW Layout* as described above and with the *Windows/Arrange...* menu option.

Place the resulting hlf file somewhere that is accessible to the user you wish to share the configuration with, and then from their machine, select the file open button to select this Desktop Configuration file.

**Note: Don't forget to save the new settings for this user!**
